Before the Internet, scientists and teenagers practically lived on different planets.
While small groups of scientists made huge impacts every day,
Millions of teens felt like they barely had voices at all.
And honestly, there wasn't a lot of communication between them.
SCIENTISTS
TEENS
EUREKA!
They didn't even realize that they wanted to hear each other.
The internet changed things.
Social media bridged the gap between the two worlds.
The more they did, the more they realized how much they [had to offer] each other. [could] [learn from]
But the internet didn't change everything.
Even though scientists could easily reach out to teens,
Teens still found it difficult to reach out to scientists.
CHARACTER!!
bounce back
frustration
Conferences are great opportunities for scientists and teenagers to meet [face-to-face]. [in person]
online and off.
But most of the time, teens listen while scientists talk.
But usually, scientists tend to do most of the talking.
PRESENTATION
That's because conferences are presentations.
PRESENT
PRESENTER
PRESENTATION
The communication they offer only flows one way.
But what about an un-conference?
