The Web makes it easier for the global community to reach science — and for the science community to reach each other. At the intersection of science and the Web,
all kinds of different people
doing + sharing science online
across + from the Web can construct these diverse ideas,
but the Web can also make it visual — to connect,
to understand each other.
ScienceOnline is a non-profit org...
that addresses the ways that science is conducted
shared,
at the intersection of science and the Web.
We bring this diverse group of people
together
for meaningful,
face-to-face
conversations outward the ways they want to connect, enabling good communication
and lasting relationships
These conversations continue online
so that everyone can participate,
participate, communicate,
and learn,
to understand each other.
understand each other.
fully continue this ongoing global, ongoing, online community
lead to innovative collaborations that way on...
